

# HES-hemp hurd

Hemp hurds are the tough woody interior of the hemp plant. It is harvested by decorticating - separating - the inner hurd material from the softer, fibrous exterior of the stalk.

The component silica (sand) in the plant prevents from burning or rotting and with the immense strength of the hurd it makes Hemp Hurd an versatile building material - it is used in, e.g., insulation and wall systems.

HES Hemp Hurd is mainly from Europe with the US distribution currently on the west coast.

The HES-hemp hurd R-value is declared at 3.1/inch.

**CATEGORY**

**MANUFACTURER**

**Pourables and Aggregates, Hemp Hurd Hemp Eco Systems Group**

**MATERIAL COMPOSITION\***

100% pure crushed hemp hurd

*\*as reported by the manufacturer*

**AVAILABLE SIZING**

HES approved Hemp Hurds in 44 lb bags

**CERTIFICATIONS & DISCLOSURES**

- Health Product Declaration (HPD)
- Declare Label
- Environmental Product Declaration (EPD)
- Safety Data Sheet (SDS)
- USDA Certified Biobased Product Label
- Other
