Kanabat Hemp Hurd

Hemp hurd is the tough woody interior of the hemp plant. It is harvested by decorticating - separating - the inner hurd material from the softer, fibrous exterior of the stalk.

The component silica (sand) in the plant prevents it from burning or rotting and with the immense strength of the hurd it makes Hemp Hurd a versatile building material - it is used in, e.g., insulation and wall systems.

Kanabat's hemp hurd is grown in France and distributed in the US via Americhanvre. According to the manufacturer, Kanabat is certified building grade by the Construire en Chanvre.

CATEGORY

Pourables and Aggregates, Hemp Hurd

MANUFACTURER

Americhanvre

MATERIAL COMPOSITION*

100% pure crushed hemp hurd

**as reported by the manufacturer*

CERTIFICATIONS & DISCLOSURES
