

MushLume Lighting Collection

The MushLume Lighting Collection consists of pendants, sconces, and table lamps and is literally grown using Ecovative's MycoComposite - a combination of mycelium and regionally sourced non-food agricultural waste. After the mycelium has fully matured, the lampshades are de-molded, dried, and heated, creating a 100% biodegradable lampshade. MycoComposite is biodegradable, naturally flame resistant, and water resistant.

CATEGORY

MANUFACTURER

Lighting, Mycelium MushLume Lighting

MATERIAL COMPOSITION*

Mycelium (binder), hemp (substrate), flour (nutrition)

**as reported by the manufacturer*
